rubber*

Type No. 700010080

What are the benefits of GOLDI natural form oval XS from 0 months?

If a baby has learned how to suckle at its mother's breast, nursing is comfortable and relaxing for both the mother and the baby. However, suckling is also tiring for the baby, and it often ends up falling asleep during or after breastfeeding. If the mother then takes the baby away from her breast, the breastfed baby will often respond with a strenuous protest. The GOLDI natural form oval XS from 0 months comes in handy for this moment, as it perfectly imitates skin-

to-skin contact with its oval nipple form and its round, flat, flexible mouth plate. One very practical aspect of the soother is that the back of the mouth plate does not have a grip tab. This means that the baby can sleep comfortably in the breastfeeding position. GOLDI recommends the application for a maximum of three months. Another plus for the GOLDI natural form oval XS: the sucking part has no air filling, making it particularly soft.

*easy to handle
with the flexible
mouth plate*
